Atkinson Center Topical Lunch

Title: *Carbon Dioxide Removal: Cornell as a Living Laboratory*

Organizers: Tobias Hanrath and Natalie Mahowald

Date: Monday, May 20th, 2019; 12:00 – 1:00pm, 300 Rice Hall

Abstract: Reaching low carbon targets requires not only sustainable energy, industry and agriculture, but also the development of carbon dioxide removal technologies. Cornell has innovative research in this area, as well as strong student project teams across the Colleges and an active campus sustainability office to implement the ideas on campus. In this topical lunch we discuss ongoing research, student projects and campus activities at Cornell in the area of Carbon Dioxide Removal. We then brainstorm new initiatives that could be implemented here at Cornell, using Cornell as a Living Laboratory, and whether to incorporate these into the climate action plan.

Co-sponsored by the Energy Systems Institute.
